

DIYA NABIHA

Game Developer

diyanabiha99@gmail.com | 03287072588 | Lahore, Pakistan

PROFILE

Motivated 2D Unity Game Developer with hands-on experience in mobile game development using Unity and C#. Progressed from an internship into a full-time junior developer role, contributing to gameplay mechanics, UI systems, animation, bug fixing, and game optimization. Strong foundation in object-oriented programming, version control, and collaborative development within senior-guided teams.

EMPLOYMENT HISTORY

Unity Developer Jan 2026 – Present

Katana Game, Lahore

- Work under the guidance of a senior developer to develop and manage 2D games in Unity using C#.
- Build and maintain gameplay mechanics, UI systems, and in-game animations for mobile titles.
- Identify and fix bugs, and optimize game performance across devices.
- Collaborate with the team on sprite integration, level design support, and player controls.

Unity Developer Intern Oct 2025 – Dec 2025

Katana Game, Lahore

- Assisted in implementing gameplay mechanics, UI systems, and player controls.
- Supported the development team in testing and refining 2D mobile game features.
- Gained hands-on exposure to the full 2D game development pipeline, from prototyping to release.

PROJECTS

3D Shooter Game with Enemy AI

- Developed a 3D single-level shooter game in Unity where the player eliminates all enemies to complete the level.
- Implemented enemy AI using a state machine with Patrol, Chase, and Attack states.
- Enemies patrol set paths, switch to chasing when the player enters detection range, and attack once within range.
- Built core 3D player controls and combat/shooting mechanics.

Mini Games Container – 6-in-1 2D Mini Game Collection

- Developed a Windows-based desktop application in Unity housing 6 individual 2D mini games within a single container app.
- 2D Arcade Racing Game – built player-controlled racing mechanics with obstacle and speed systems.
- Memory Puzzle Game – implemented card-matching logic, timer, and score tracking.
- Sorting Puzzle Game – designed drag-and-drop sorting mechanics with level progression.
- Balloon Popper Game – built tap-based interaction system with spawning and scoring logic.
- Space Shooter Game – implemented player movement, shooting mechanics, and enemy AI.
- Mario-Style Platformer Game – developed side-scrolling platform mechanics, jump physics, and level design.
- Managed UI navigation between games, shared scoring system, and overall app architecture.

EDUCATION

BSIT Oct 2021 – July 2025

Punjab University, Lahore

- Worked on academic projects related to application and software development.

KEY SKILLS

C# • Unity Development (2D) • Gameplay Programming • UI/UX Implementation in Unity
• Game Optimization • Debugging
Version Control with Git • Problem Solving • Team Collaboration
